About A-PDF Flash Package Builder

If you want to release your Flash work in EXE format, you must use conversion tool to convert .swf file into .exe file, or you must publish your work in EXE format in Flash design environment.

A-PDF Flash Package Builder is a fast desktop utility program that lets you create professional Windows executable file (.EXE) from flash (SWF) or flash video (FLV) formats. You can customize your flash executable files to playback your flash and flash videos in the best way, and protect them from being used.
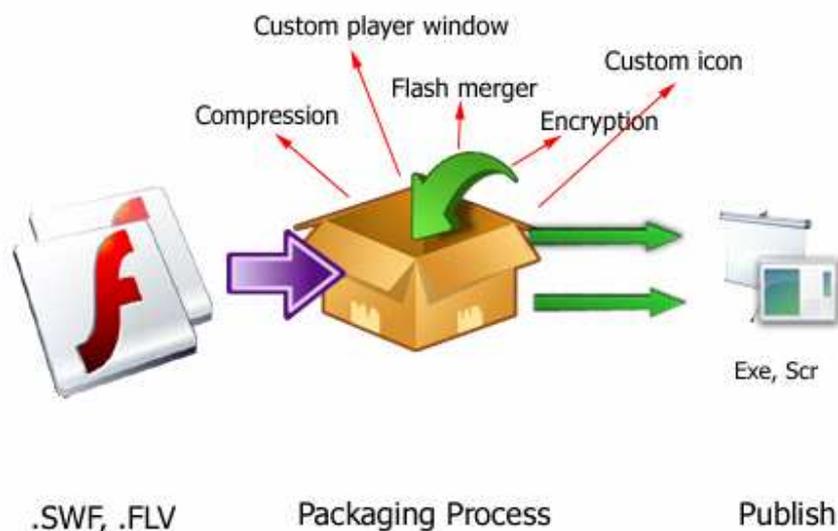

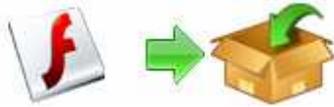

Why use A-PDF Flash Package Builder?

The flash (SWF) and flash video (FLV) file format is designed to run on a web browser on the Internet and the projector file is a standalone application which makes your movies viewable without using a browser. So if you want to share our favorite Flash movies or game without the web browser, we need to delivery them in .exe format. One obvious benefit of using a projector is that projectors will work even if no Flash player is installed on your operating system.

A-PDF Flash Package Builder generates encrypted Flash Projector file in .EXE format. It means it is very hard to extract the original .swf file from the encrypted .exe file. It protect your movie from the exe2swf and decompiler tools.

Flash Package Builder Feature

- Package the published output with full application installer for easy deployment.
- Supports custom icon
- Custom player window size AND full screen mode
- Up to 60% compression ratio
- Save and restore executable file settings with projects.
- Customize built-in flash player interface;
- Protect your flash and flash videos from being saved to local drivers;

Using A-PDF Flash Package Builder

A-PDF Flash Package Builder can be started either by launching the application via a desktop shortcut, or directly from within Windows/Windows Explorer.

When you start the program, you will be presented with the primary screen from which all actions are taken.
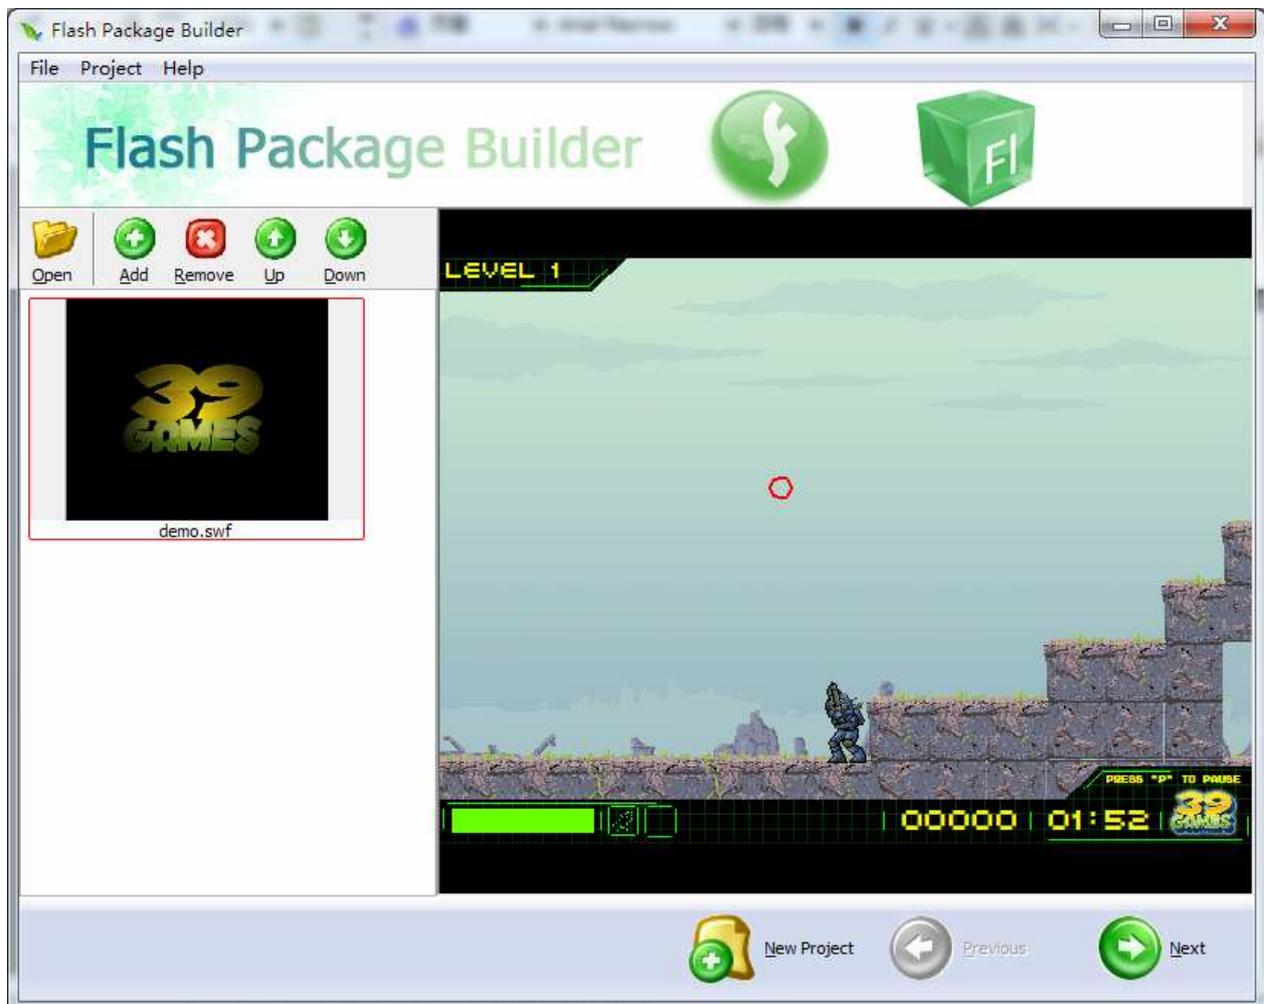

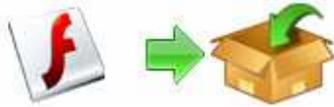

Selecting Flash File

Clicking the **Open flash** icon will open the standard file browse and select window. From that window you can navigate to the folder and find the SWF files and

Click Add icon to add the flash file to the left Flash List
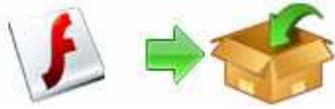

Each added file is displayed in the Flash File List window, as seen in the example below. You can view any of the Flash files in the Right Flash Preview window
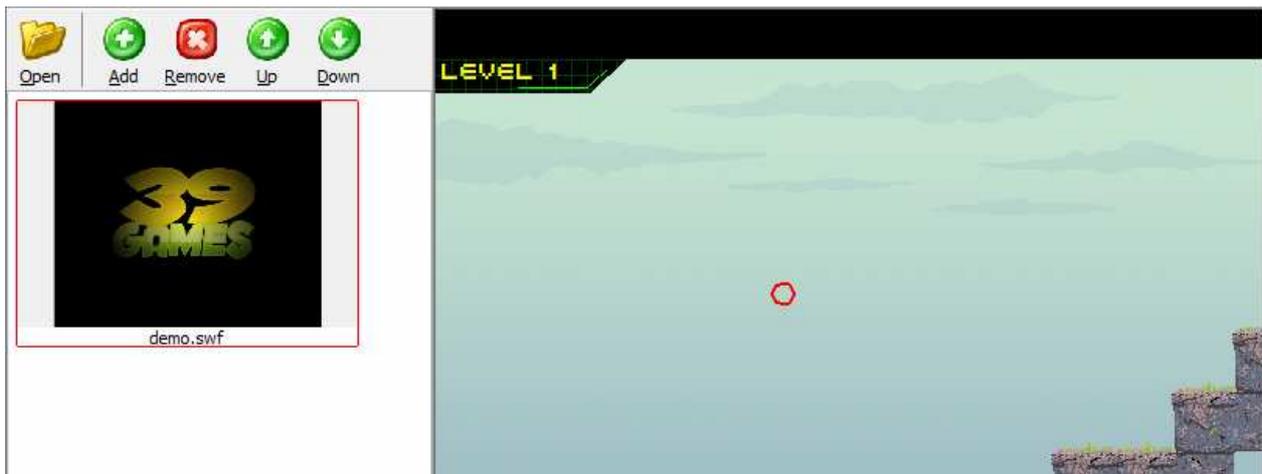

Set Output Package Option
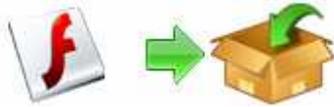

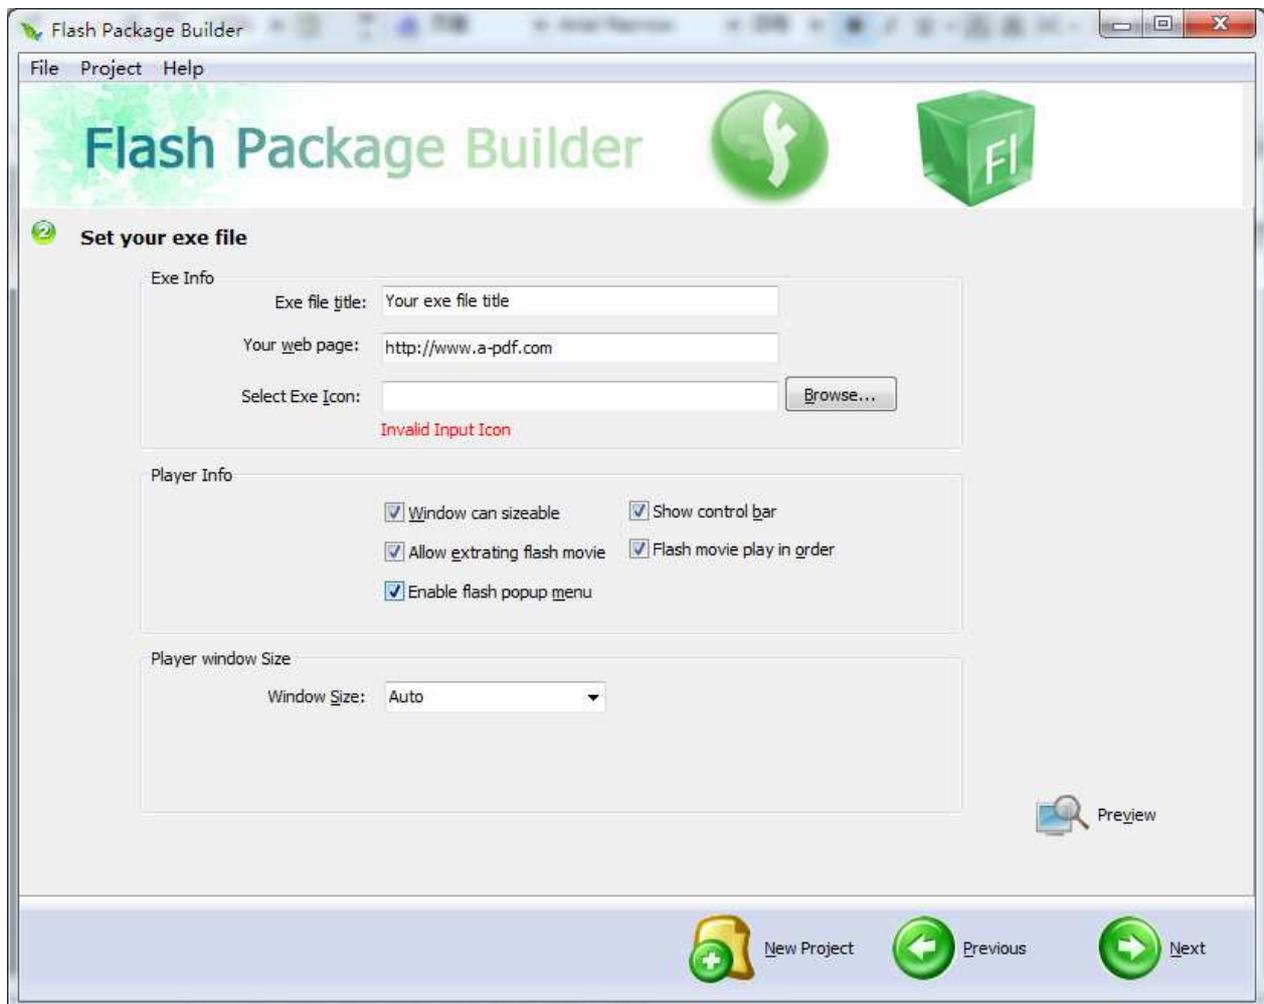

Exe File Title: You can set the exe package window caption here
Your web page: define the output package menu->about->home page link URL.
Select Exe Icon: define the output package icon

You can click icon to preview the output look&Feel

Create EXE Package
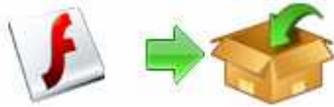

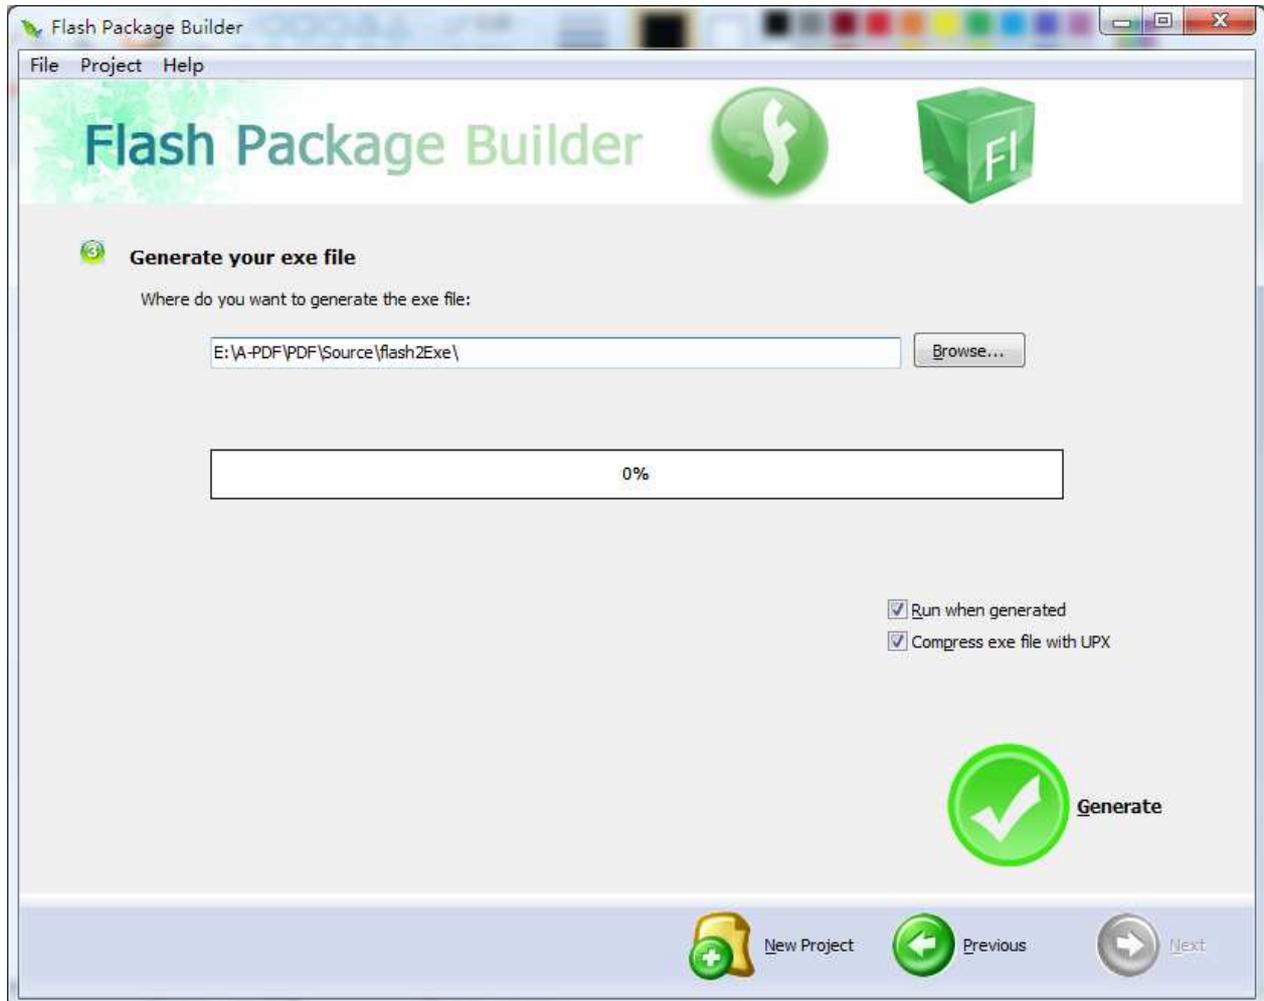

After inputing the output filename, you can click the **Generate** icon

to create Exe Package.

Ending Your Session
When you have completed your work, choose the **File** option and select **Exit** from the dropdown list.
